

# Implementation Notes

Arni Magnusson

March 8, 2021

The following overview gives an idea (but no promises) of which functions may work for databases other than MS SQL Server.

## *Browse database*

Function	Gets information from	Works for
<code>dbOverview</code>	<code>sqlTables()</code> , <code>sqlColumns()</code>	All RODBC databases
<code>dbStorage</code>	<code>sys.allocation_units</code> , <code>sys.indexes</code> , <code>sys.partitions</code> , <code>sys.schemas</code> , <code>sys.tables</code>	MS SQL Server
<code>dbTime</code>	<code>sys.tables</code> , <code>sys.views</code>	MS SQL Server

## *Browse table*

Function	Gets information from	Works for
<code>tableDim</code>	<code>tableNrow()</code> , <code>tableNcol()</code>	All RODBC databases
<code>tableHead</code>	<code>sqlQuery()</code>	All RODBC databases
<code>tableNcol</code>	<code>sqlColumns()</code>	All RODBC databases
<code>tableNrow</code>	<code>sqlQuery()</code>	All RODBC databases
<code>tableOverview</code>	<code>sqlColumns()</code> , <code>tableNrow()</code>	All RODBC databases

## *Helper functions*

Function	Gets information from	Works for
<code>tableQuote</code>	(self-contained)	All RODBC databases
