---

download\_microdata     *Download Microdata*

---

**Description**

Checks the most recent available microdata uploaded to our GitHub repository.

**Usage**

```
download_microdata(dir = tempdir(), overwrite = TRUE)
```

**Arguments**

<code>dir</code>	The directory where the microdata will be downloaded.
<code>overwrite</code>	Logical. If TRUE, the function will overwrite the file if it already exists. If FALSE, the function will stop and return an error if the file already exists.

**Value**

A tibble with the available microdata by country and year.
